HEALTHCARE MANAGEMENT SYSTEM

- The system is a software that provides sure automation of much vital health care daily processes.
- The software covers the services that unify and simplify the work of healthcare professionals as well as their interaction with patients.
- Healthcare providers use the software to collect, store, retrieve, and exchange patient healthcare information more efficiently and enable better patient care.
- The system stores all the records in a relational database, making sure the data is secure and integrity is preserved. The system has a built-in billing feature that allows the healthcare facility to bill the patient on the go.
- The system packs a lab test feature allowing doctors in the hospital to request lab tests from the lab associated seamlessly.

PATIENT REGISTRATION

Every patient who visits the hospital has to get registered before consultation, treatment, or any investigations to be done. Registration process of the patient's involvement in capturing certain general and demographic information about the patient, followed by allotment of a unique Registration / Patient Identification number. The Patient ID will remain the same for his all subsequent visits to the hospital. The Registration charge (which varies depending upon the hospital) can be collected from the patients during registration, and a receipt will be generated.

The following information is captured for the registration of OPD Patients:

- Patient Demographic Details like Name, Age, Sex, Address, Contact number, Nationality, etc.
- Referring Source.
- Department & Consultant to be visited.
- Medical details like weight, blood pressure, chronic ailments (diabetes, heart problems, surgical history, or any allergies), etc.

BILLING

This module covers the complete billing functions involved from the date of admission of the patient till discharge from the hospital for the facilities provided to the patient. Each patient is automatically assigned with a unique In-Patient Admission Number (IPD No.), which is used for identifying case sheets and all services utilized by the patients. It provides functionality to make admission deposit amounts, and option to print out a receipts, clearance bills, final settlement bill along with discharge summary during the course of the billing process.

The OP patient's bills can be created in this billing module , the services availed by the patients (consultation charges, procedural charges, investigation & pharmacy charges etc.,) are added to the bill as per predefined price list setup by the administrator or allowing the variable charges for the concerned services. Discount can be added to the final bill output, the module will also assist in partial payments and prints the OPD slip or prescription slip in PDF or Word format.
