

# HealthCare Management System

*Kayla Heydon*

# INTRODUCTION

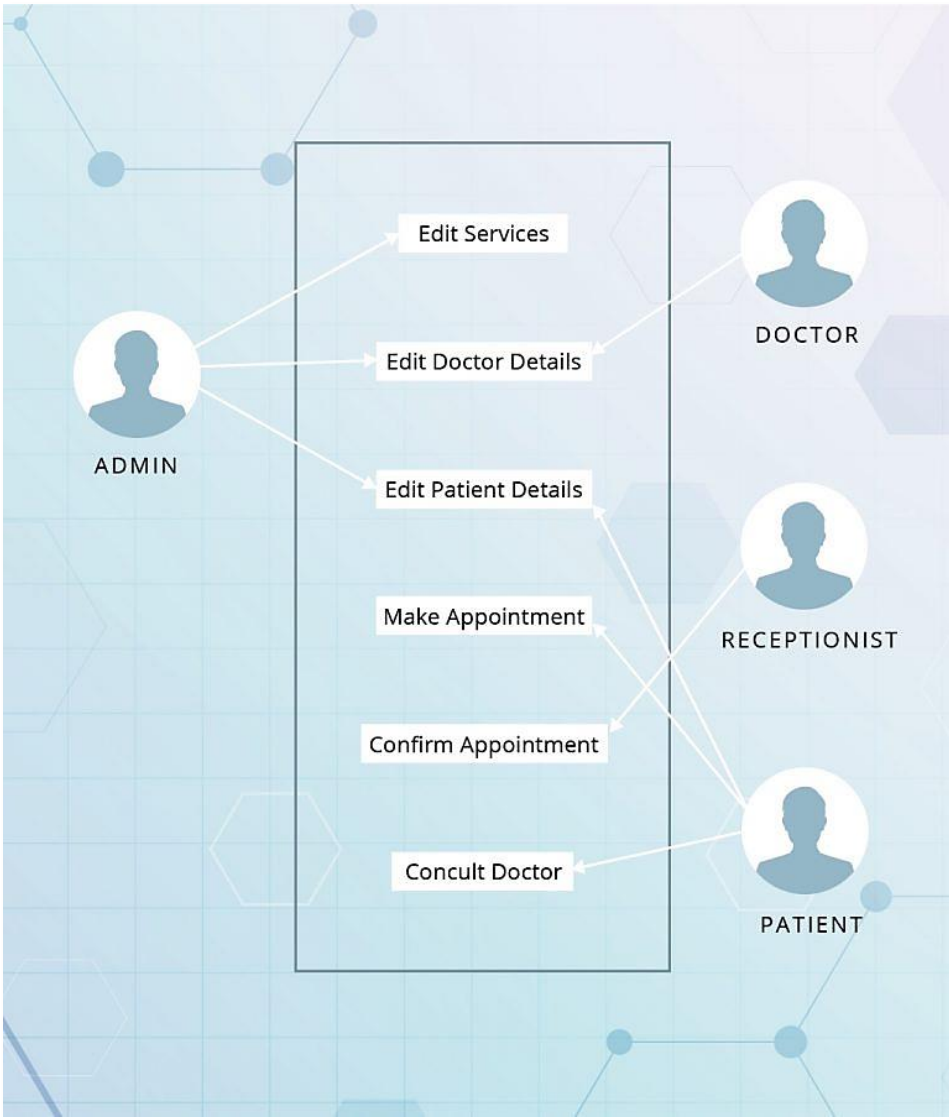

❖ Technology is rapidly changing day by day, and there is a demand for time to move with technology. Healthcare or hospital management systems are essential to manage or upgrade with the latest technology. Health is the priority of any nation at the global level; therefore, it is necessary to have a system that manages or improve the healthcare system.

❖ We have developed a solution in the form of a Healthcare Management System.

Our Healthcare Management System has transformed all administrative and clinical operations of the healthcare department.

# ABOUT US

- ❖ Our system is designed in a user-friendly interface by understanding the current challenges of the healthcare industry and keeps it healthy. It offers different services of management such as staff management, lab tests, billing, etc.
- ❖ We always pay attention to the customer's satisfaction and requirements. It is our priority to seek the customer's interest and keep them satisfied with our products and services.

# SYSTEM FEATURES

## ❖ Patient Management

- It is used to control patient flow. It can be used to register them, get the data of the patients' health condition, view the treatment and check the medical history and reports.
- Patient registration is a crucial strategy for improving the intake process, which can often get slowed down with complicated data collection and administrative tasks.

## ❖ Associate Management

- This module provides the human resources administration. It updates the job description of employees, updates the hospital structure, tracks the recruiting records.

## ❖ Billing

- The billing module organizes the financial affairs of both customers and the medical institution. It stores and presents all the patient payment details, hospital financial records on expenses and overall profit.

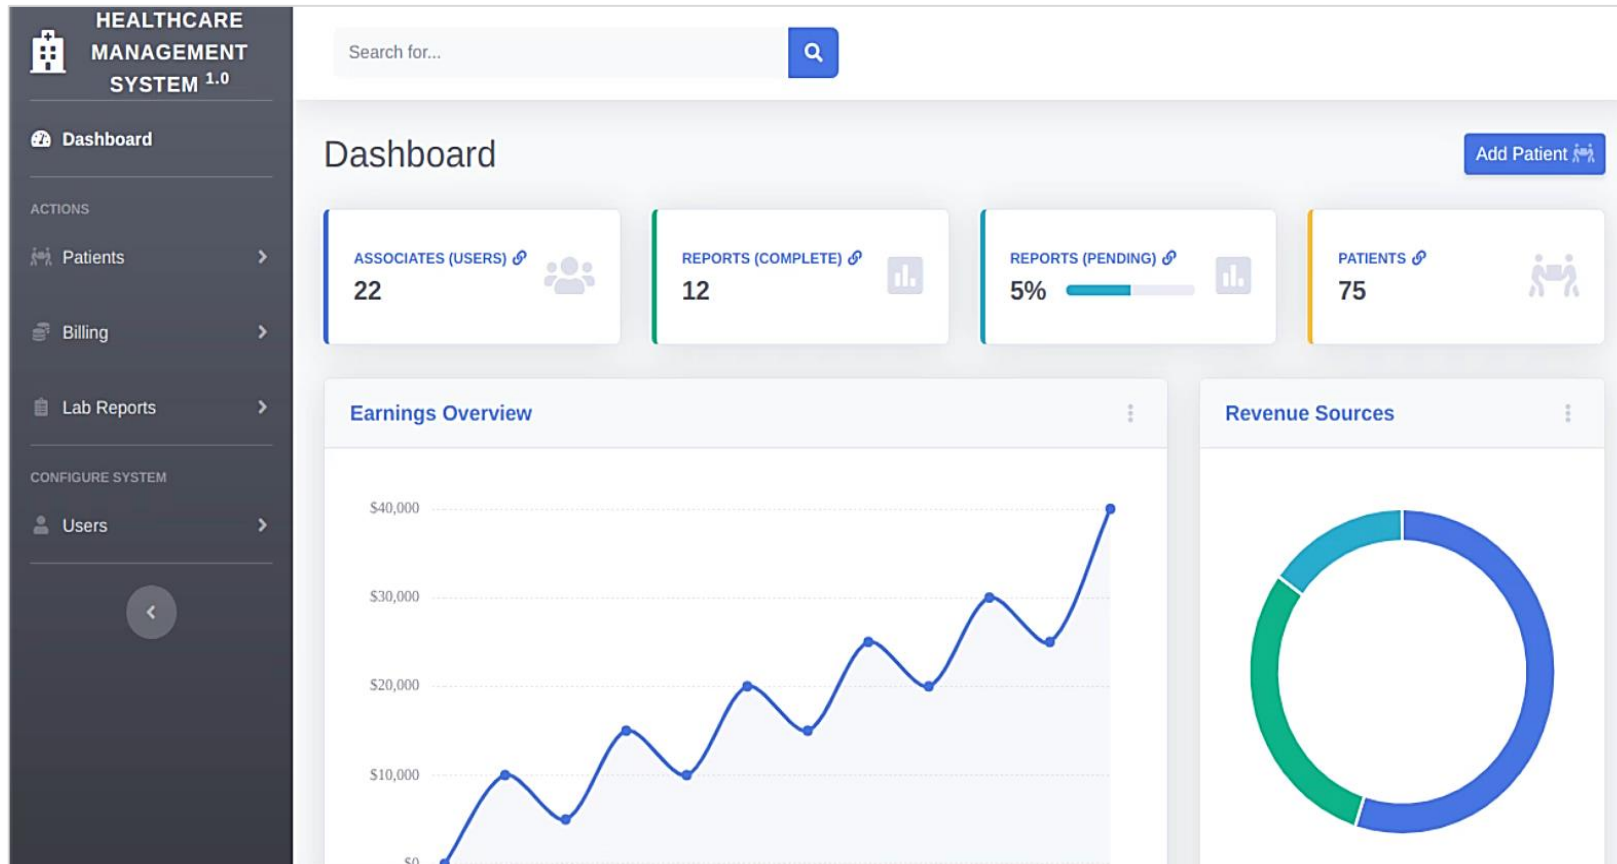

## ❖ Laboratory Management

- Lab management module shows the test results of the patient. The lab data can be viewed by associates and generated for the patients' reports.

## ❖ Reports

- Report management part stores the already processed detailed information. This module helps management collect, analyze and view the performance data in a comprehensive format.

# USER-FRIENDLY INTERFACE

- ❖ Simple
- ❖ Clean
- ❖ Intuitive
- ❖ Reliable

# CONCLUSION

- ❖ Our system automates numerous daily operations and enables smooth interactions of the users. This system is an excellent opportunity to create a distinct, efficient, and fast delivering healthcare model. Implementation of healthcare facility management system projects helps to store all kinds of records, provide coordination and user communication, implement policies, improve day-to-day operations, arrange the supply chain, manage financial and human resources, and market healthcare services.
- ❖ This beneficial decision covers the needs of the patients, associates, and healthcare authorities and simplifies their interactions. Many healthcare facilities have already experienced its advantages and continue developing new healthcare management system project modules.

THANK YOU
